

To whom it may concern

I have been asked to comment the capability and performance of PharmaCenter Ltd, which I will do with great pleasure.

" Pharmacenter Ltd, headquartered in Budapest, Hungary is a young, well connected, fast moving specialist distributor company in the area of Oncology, Urology and Orphan Drugs.

As Director, Central and Eastern Europe, Middle East and Africa for Shire Human Genetic Therapies AB (previously Transkaryotic Therapies AB) from 2001 to 2010 I recruited PharmaCenter in order to develop Shire's businesses in Hungary. PharmaCenter has during this period very successfully established and developed Shire's businesses for Orphan Diseases in Hungary comprising the products Replagal for Fabry Disease, Elaprase for Hunter Disease and VPRIV for Gaucher Disease.

I thus know Pharmacenter since several years as an excellent business partner. They built-up the marketing and sales channels for Shire's Orphan Drug products from an early stage into a highly successful business.

Pharmacenter Ltd expanded recently to Slovakia, Czech Republic, Bulgaria and Romania and I trust that they are able to build a successful pharmaceutical marketing, sales and distribution business in Eastern Europe.

Pharmacenter Ltd must be considered as a modern, valuable partner in building up Oncology, Urology and Orphan Drug marketing & sales channels and doing the successful commercialization of medical

products related to these fields.

I can recommend the Pharmacenter team from my personnel experience to any company with serious interest in expanding their Eastern European pharmaceutical business activities.
